

DIRECTION 1A

Back bar

Every screen of the Blazor app, restyled: dark as the primary theme with a light counterpart, desktop/web and below-lg, with Marga given the room she was always meant to have. Structure, routes, copy and test ids are unchanged from **develop**.

9 screens

Dark + light

Desktop + mobile

Hi-fi

**How to read this**

One page per screen per theme. Each page carries the desktop frame, the below-lg frame, and the notes that pin values the frames cannot state.

What it is not

These frames are design references drawn in HTML, not production markup. Rebuild them in **JiggerJot.Shared.Ui** with Razor + Bootstrap, keeping every **data-testid**.

Source of truth

Tokens live in **wwwroot/css/app.css**. Copy stays in **Resources/AppStrings.resx** — no string in this document is new.

DARK — THE PRIMARY THEME

--app-bg #15181C	--surface #1B1F25
--app-border #2F353E	copper, lifted #D9865A
--brand-accent #D9A441	--bs-primary #B4562A
primary-bg-subtle #2A1A12	primary-border-subtle #5C3620

Ink #F2EDE8 · muted #A79E94 · faint #8A8178. Copper #B4562A stays the button fill; #D9865A is text-on-dark only (4.9:1 on #15181C).

LIGHT — THE COUNTERPART

--app-bg #F6F3EF	--surface #FFFFFF
--app-border #E4D8CF	copper #B4562A
--brand-dark #8C3F1D	text-emphasis #7A3517
primary-bg-subtle #F9EDE7	primary-border-subtle #E8C4B2

Ink #1E1B18 · muted #6B635A · faint #8A8178. Brass is a rule and a label colour on dark only; on light use copper #B4562A or emphasis #7A3517 for text.

TYPE

Instrument Serif

Display only: the count, drink names, card headlines and Marga's line.
Regular weight, never bold — the face has one weight and faux-bold breaks it.
Helvetica Neue / Helvetica / Arial — every control, label, list meta and body line. Unchanged from today.
numeral 128 / .8 · serif h1 29 / 1.25 · serif row 26 · body 15 / 1.5 · meta 13 · label 11 uppercase, letter-spacing .16em

SPACE & SHAPE

Scale 4 · 8 · 12 · 16 · 22 · 26 · 30 · 44
Page gutter 28px desktop, 20px mobile
Radius: pill 999px (buttons, chips)
Radius: panel 16px · field 12px
Hairline 1px, never a shadow on dark
Light theme keeps shadows at Bootstrap shadow-sm

MARGA

Avatar 96 on Home and Shelf
Avatar 72 on detail, catalog, onboarding
Avatar 32 inline in a list row
Ring: 1px #D9A441 on dark, none on light
Her line is serif, 23–29px, never muted grey
Scene 512 on Login and both empty states

MargaSays.razor gains a Tone parameter — card (96px, serif line, brass label) and inline (32px, 14px sans, no label). The old Size parameter and Compact stay for call sites that pass a number. Focus ring everywhere: 0 0 0 2px var(--app-bg), 0 0 0 4px rgba(180,86,42,.55).

LAYOUT

Desktop: two columns, 1.15fr / 1fr, gap 52, max-width 1100, padding 40/28. Mobile: single column, 20px gutter, tab bar fixed at the foot.

RULES, NOT CARDS

The three drinks are hairline rules, not a **list-group**. The only boxed thing on the screen is the unlock panel — so it reads as the one thing to act on.

KEEP

home-marga, home-count, home-show-makeable, home-update-shelf, home-makeable-list, home-unlocks, home-show-almost.

Empty shelf

The count block is replaced by Marga's scene at 260px with **Marga_HomeEmpty** beside it, then **Set up my shelf** as the primary pill and **Tick what you have** as a text link. No empty zero.

Loading

Brass 2px bar under the header, indeterminate; the numeral holds its space with — at 40% opacity. No spinner in the middle of the page.

Failure

Both fetches are optional furniture: on error Marga and the unlock panel are simply absent; the count and the list stand alone. Unchanged from today's behaviour.

Ground #15181C → #F6F3EF, hairline #2F353E → #E4D8CF, ink flips, numeral #D9865A → #B4562A, brass labels become copper. Nothing moves.

Light theme puts the header and the tab bar on `#fff` with a hairline, not on copper – the copper header is what makes today's app read as a Bootstrap admin. The current tab keeps its 2px indicator plus weight.

icon_light.svg is for dark grounds. Ship icon_dark.svg from the same source for light, rather than filtering it.

theme.js keeps owning the pre-paint apply; every value above is a token in :root / [data-bs-theme="dark"]. No component reads a theme flag.

Auto stays the default and follows the OS. The dark frame is what most people will see in the evening, which is when this app is used.

Muted text is #A79E94 on dark (7.1:1) and #6B635A on light (5.8:1). Never drop meta text below these.

Code step
The right panel swaps the two buttons for the 6-digit field: 24px, letter-spacing .4rem, centred, on #1B1F25. Marga stays exactly where she is — the room does not change because the form did.

Below 992px
Two columns collapse to the stacked frame shown. Below 380px the scene drops to 240px tall.

Art
The scene is a fixed raster at 512px. If it is ever reshot, supply a 2× landscape crop as well — the desktop panel is ~520×680 and currently upscales.

MARGA, FULL PRESENCE
The scene stops being a 40px avatar beside a caption and becomes half the screen: `marga_scene_512.png`, `object-fit:cover`, with a bottom gradient to #0F1216 so her line sits on solid ground. Her sentence is the page's headline — `Marga_LoginLine`, unchanged.

MOBILE
Scene 300px tall at the top, lockup over it, the panel sliding 26px up under the gradient. The whole form stays above the fold on a 390×812 device.

KEEP
`login-email`, `login-send-magic-link`, `login-send-otp`, `login-otp-code`, `login-verify-otp`, `login-mfa-code`, `login-error`. Provider buttons still render only for configured providers.

English

Auto

ONE THING STAYS DARK

Her panel keeps its dark ground in both themes — the illustration is a night bar scene and carries its own light. Only the form side flips to #fff. This is the one intentional exception to the theme swap.

LOCKUPS

Form side uses lockup_light.svg (dark ink); over her scene, always lockup_dark.svg. Today's content: url() swap in app.css can stay.

ANONYMOUS CHROME

Login, /join, /auth-callback and /auth-error stay chromeless, as in MainLayout.razor. /auth-error reuses this split with her line replaced by the error copy.

Errors

The login-error alert sits directly above the provider buttons: 12px radius, #F8D7DA / #58151C light, #2C1214 / #F1AEB5 dark.

Native

MAUI shells render the same two-panel layout; the magic-link button is absent and the code button becomes primary, exactly as today.

Performance

The scene is the first paint on the anonymous route — preload it in index.html alongside the boot screen, which already uses it.

Filters panel

Opens under the chip row as a 16px-radius panel on #1B1F25 / #fff: four fields (Made with, Method, Glass, Served as) in a 4-up grid, Clear filters as a text link. Same fetch-once behaviour.

Unlocks card

Under One ingredient away, the cocktail-unlocks panel sits where the Marga row is here, in the copper-subtle panel style from Home.

SWITCHES BECOME SEGMENTS

The two form switches are replaced by one exclusive chip row — I can make now / One ingredient away / Everything — because they already behave exclusively in code. Each carries its count.

KEEP THE IDS

cocktail-makeable and cocktail-almost move onto the chips; they stay checkable inputs (btn-check) so the keyboard and screen-reader behaviour is unchanged.

ROWS

Hairline rows, 18px vertical. Marga inline at 32px with her line in copper — it is advice, not a caption. Missing-ingredient line uses the same copper on dark, #7A3517 on light.

Empty

Her scene at 260px, the resx line beneath, then Tick what you have. The starter-bottle sentence keeps #D9865A / #7A3517.

Deep links
`?makeable=true` and `?almost=true` still preselect a chip on load — Home and Shelf both land here.

Density
20 rows per page as today; at 18px rows plus meta a full page is ~1500px of scroll. Acceptable — the chips are sticky below 992px.

PAGINATION
Previous / Page n of m / Next stays at the foot of the list, as text-weight controls on a hairline — no button group. The count moves up beside the chips, where it answers the filter.

SEARCH
Same 300ms debounce and request-ticket guard. The field is a pill on the surface colour, 280px at desktop, full width on mobile.

SOURCE CREDIT
Right-aligned, 12px, muted — load-bearing (duplicate names across the two books), so it never wraps: `white-space:nowrap`.

Touch
Chips are 38px tall at mobile, above the 44px target only because the whole row is the hit area — pad the label, not the text.

AMOUNTS LEAD

The measure is set in the serif at 21px and copper-lifted, in a 104px column: on a recipe the quantity is the thing you scan, and today it is 16px bold sans in a 6rem box.

TWO MARKS ONLY

A line says something in exactly two cases — Substitute (you'd pour X, brass) and Missing (not on your shelf, #E88A8A dark / #B02A37 light). Everything pourable stays silent.

KEEP

cocktail-name, cocktail-facets, cocktail-makeability, cocktail-marga, cocktail-lines, cocktail-line-substitute, cocktail-line-missing, cocktail-fork, cocktail-instructions, cocktail-source, cocktail-forked-from.

Fork

Primary pill at the foot of the ingredient column on desktop; a fixed bar above the tab bar on mobile. It navigates to the copy, as today. cocktail-fork-error renders inline beneath it.

Marga's rule

Substitution outranks status; then Makeable / AlmostMakeable; silence beyond that. Unchanged logic — the change is that her line is 26px serif, not a caption.

Units

The API still renders Display. The oz · as written label above the list is a read-only echo of the user's preference and links to Settings.

Long names	Optional lines	Print
The serif title wraps to two lines at 52px before shrinking; do not truncate. <code>text-wrap: balance</code> .	Dash in the amount column, muted ingredient, <code>optional</code> as plain text — the Bootstrap badge goes.	A recipe is the one screen people print. Add <code>@media print</code> : white ground, hide chrome and the fork button.

Keep
shelf-search, shelf-only-available, shelf-marga, shelf-jump + shelf-jump-slug, shelf-cat-slug, shelf-item-{id}, shelf-add-*, shelf-payoff, shelf-count.

Add form
Opens in place under the category's pills, on the surface colour with a 16px radius. Name / Category / Subcategory, then Add to my shelf + Cancel. Conflict still redirects the search.

Optimistic ticks
Unchanged: paint immediately, roll back on failure, 400ms quiet before re-asking for the payoff total. The pill animates fill in 120ms ease-out.

CARDS BECOME SECTIONS

The per-category card goes; each category is a serif heading on a hairline with its **n of m** right-aligned. 191 pills in 16 cards is 16 boxes of chrome around the only thing that matters.

PILLS

9px/16px, 14px label — up from Bootstrap's **btn-sm**, because this is a touch target people hit 190 times. Ticked = copper fill. The bottle Marga just named is outlined in **#5C3620** copper so it can be found.

PAYOFF

Sticky, above the tab bar via **--tab-bar-clearance** as today. The count is serif and copper; the drinks phrase stays in the sans.

Why the shelf matters most

It is the screen with the most dwell time and the one that gates every other answer. Density and progress are the only two jobs — everything else on the page is subordinate.

Counts

n of m is always over the whole category, never over what search left on screen. Unchanged.

THE NAMED BOTTLE

On light it reads as copper text on #F9EDE7 with an #E8C4B2 border — present, not ticked. It must never be mistaken for owned.

JUMP BAR

Horizontal scroll, hairline chips with n/m. Anchors keep scroll-margin-top: header + 1rem and the explicit /shelf#cat-... path.

EMPTY SEARCH

No ingredients match that plus Add your own, pre-filled from the search term — unchanged.

Onboarding shares this

Step 2 of the wizard renders these exact sections and pills — one control, two screens.

Nothing is written until Finish
Unchanged: one bulk PUT of every row. Skip writes nothing and goes to /cocktails; Finish lands on /cocktails?makeable=true.

Pre-ticked
Suggestions arrive selected. The copper fill has to read as already yours here — same pill as the Shelf, deliberately.

HER SECOND FULL APPEARANCE
The wizard is the other place the scene earns its size: a new household has no data, so the only thing to look at is her. Desktop splits .85fr / 1.15fr; mobile gives her the top 240px.

PROGRESS
Step 1 of 2 plus a 3px brass rule at 50% / 100%. The copy string is unchanged; the rule is the addition.

STEP 2
Her panel stays; the right side becomes the Shelf's search + category sections, at the same pill size. Buttons become Back / Save my shelf.

KEEP
onboard-step, onboard-staples, onboard-item-{id}, onboard-search, onboard-count, onboard-back, onboard-next, onboard-finish, onboard-skip.

Chromeless?
No — the wizard keeps the app header. It is reachable from Home, and trapping people in it was never the intent.

HER PANEL STAYS DARK

Same exception as Login: the scene keeps its night ground in both themes; only the working side flips. On light the panel base is #2A1A12 so the gradient lands warm.

SAME CONTROL, TWICE

Step 2 renders Shelf sections verbatim — one pill component, one grouping, one set of counts. If the Shelf's pill changes, this changes with it.

COUNT

The running total is the same serif-and-copper figure used by the Shelf payoff, so the wizard's ending reads as the Shelf's beginning.

No staples to suggest

Onboard_NothingToSuggest replaces the pill row; Next stays enabled.

Save failure

onboard-save-error renders above the footer row, 12px radius warning, and the wizard stays put.

Returning

Anything already available arrives ticked. Re-entering the wizard is safe and never discards a shelf.

TWO COLUMNS, NOT ONE LONG FORM

The drink on the left, its ingredients on the right. Today's 5-across ingredient grid becomes an amount field, the ingredient with role and required as a sub-line, and a remove control — the two selects move into the row's own popover.

AMOUNT AS SERIF

The amount field renders its own value in the serif, so the form previews the recipe it is writing.

KEEP

write-name, write-serving, write-glass, write-method, write-instructions, write-line-{n}-*, write-add-line, write-save, write-error.

VALIDATION

Name and at least one complete line, as today. Errors attach to the field, never a summary alert at the top; **write-error** keeps its place above Save for server failures.

MOBILE

One column; the Save button becomes a fixed bar above the tab bar. The ingredient row collapses to amount + name with role and required behind the row's popover.

FORK

The same form, pre-filled, with **Based on X** under the title and **write-forked-from** intact. Saving lands on the new recipe.

FIVE CARDS BECOME TWO COLUMNS

Providers, 2FA, preferences, notifications and the danger zone are five bordered cards today. They become labelled groups of hairline rows in two columns – the same information at roughly half the height.

SELECTS BECOME SEGMENTS

Theme and Measurements have three fixed options each, so they are segmented pills – the choice is visible without opening anything. Language stays a select (the list grows).

DANGER ZONE

No red box. A single red text link at the foot, which opens the existing confirm dialog. The box made deletion feel like a feature.

KEEP

settings-* ids and the MfaCard / NotificationPrefsCard components – restyle inside, same parameters.

SAVING

Each row saves on change with no Save button, as today. The toast stays; on failure the control reverts and the toast says so.

THEME CONTROL, TWICE

The header switcher and this segmented control write the same preference. The header one can become icon-only once this exists.

2FA FLOW

Enabling still expands in place: QR, manual key, 6-digit confirm, then recovery codes in a monospace block with a copy action.

LAST PROVIDER

Unlink stays disabled when it is the only credential, with the existing explanation beneath.

SIX CARDS BECOME FOUR GROUPS

Name and Members on the left; Invitations, Ownership and Data on the right. Row actions are text links, not outline buttons — a member row had three buttons competing with the name.

ROLE

Owner is the only copper-tinted badge; Admin and Member are neutral. The household name renders in the serif, because it is a name.

MOBILE

Row actions collapse behind a ... menu at 44px; everything else stacks in the same order.

KEEP

household-name, household-rename, household-members, household-member-{id}, household-invite-*, household-transfer, household-export, household-leave.

PERMISSIONS

Non-owners see the same layout with Rename, Transfer, Remove and role changes absent — not disabled. Members still see the roster and the export.

JOIN BY INVITE

/join/{token} is chromeless and reuses the Login split: her scene on one side, the invite and a single Join this household on the other.

DESTRUCTIVE ACTIONS

Red text links, each behind the existing confirm dialog. Revoke and Remove both re-fetch the roster on success.

NOTIFICATIONS

The header bell is unchanged in behaviour; restyle its dropdown as hairline rows on the surface colour, brass dot for unread.

SEQUENCE

- 1

Tokens and type. Add the dark and light token sets to `app.css`, self-host Instrument Serif as a `@font-face` in `wwwroot/fonts`, add `-font-display`. Nothing visual changes yet.
- 2

Chrome. `AppHeader` and the tab bar off copper onto the surface colour with a hairline and a 2px current-tab indicator. This single step is most of what makes the app stop looking like Bootstrap.
- 3

Primitives. Pill buttons, pill inputs, the ingredient/bottle pill, status badges, the hairline list row, the 16px panel. Page 02 is the spec. Build them as CSS on Bootstrap's classes so no markup churns.
- 4

MargaSays. Add `Tone="card|inline"`, the 96/72/32 avatar sizes, the brass label and the serif line. Every call site improves at once.
- 5

Screens, in this order: Home, Shelf, Cocktails, Detail, Login, Welcome, Write, Settings, Household. The first two carry the identity; the last two are mostly deleted chrome.
- 6

Sweep. Focus rings, reduced-motion, the print rule on Detail, and a pass in both themes at 390px, 768px and 1440px.

DO NOT CHANGE

Routes, page parameters, API calls, the makeability and unlock logic, Marga's selection rules, optimistic tick behaviour, the `theme.js` pre-paint apply, unit conversion, localisation keys, and every `data-testid`. This is a restyle: if a change would appear in a behaviour test, it is out of scope.

NEW STRINGS

None. Every word in this document already exists in `AppStrings.resx`, including `Marga_*`. The chip labels on Cocktails reuse the existing switch labels; the counts beside them are formatted numbers, not new copy.

ACCESSIBILITY

Ratios on page 01 are the floor. Pills stay real `btn-check` inputs, so keyboard and screen-reader behaviour is inherited. The serif is display only — never a label, never below 20px. Motion is limited to 120ms fills and the 200ms panel expand, both dropped under `prefers-reduced-motion`.

RISKS

Instrument Serif has one weight — anywhere the codebase applies `fw-bold` to a display element, remove it rather than letting the browser synthesise. The Shelf is the only screen where the restyle changes DOM shape (cards to sections); expect its component tests to need new selectors even though the ids survive.

DEFINITION OF DONE

Both themes on all nine screens at three widths; no Bootstrap card border visible anywhere except the copper-subtle panel; Marga at 96px on Home and Shelf and full-bleed on Login and Welcome; every existing test green with no id edits.

Source: `argamboad/jigger-jot` · branch `develop` · `src/Shared.Ui`. The recreation of the current UI and this direction's three alternatives are in the project alongside this document.
